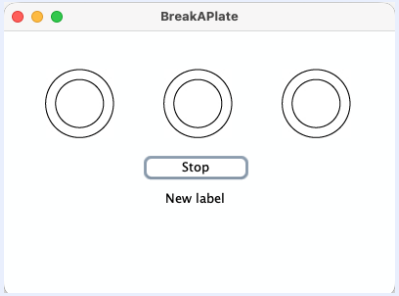
Credit Name: CSE 3010 Computer Science 3
Assignment Name: BreakAPlate

Decribe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?



```java
String eventName = e.getActionCommand();
if(eventName.equals("play")) {

    plate1.setIcon(plate);
    plate2.setIcon(plate);
    plate3.setIcon(plate);

    button.setText("Stop");
    button.setBackground(Color.red);
```

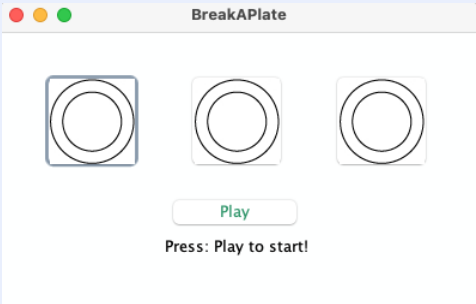
The button will not turn to a red background color.

Solution: There is no solution. It is not possible to paint a solid red background color on Mac GUI without distorting the box/border. Changed the button text color instead.

```java
plate1 = new JButton(plate);
plate1.setBounds(37, 34, 80, 80);
panel.add(plate1);

plate2 = new JButton(plate);
plate2.setBounds(158, 34, 80, 80);
panel.add(plate2);

plate3 = new JButton(plate);
plate3.setBounds(279, 34, 80, 80);
panel.add(plate3);
```

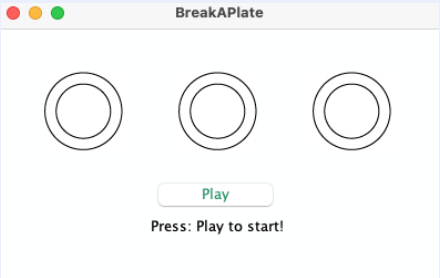


```java
plate1 = new JButton(plate);
plate1.setBounds(37, 34, 80, 80);
plate1.setFocusPainted(false);
plate1.setBorderPainted(false);
panel.add(plate1);

plate2 = new JButton(plate);
plate2.setBounds(158, 34, 80, 80);
plate2.setFocusPainted(false);
plate2.setBorderPainted(false);
panel.add(plate2);

plate3 = new JButton(plate);
plate3.setBounds(279, 34, 80, 80);
plate3.setFocusPainted(false);
plate3.setBorderPainted(false);
panel.add(plate3);
```

Solution: Remove the Border:
button.setBorderPainted(false);
Remove the Background:
button.setContentAreaFilled(false);
Remove the Focus Outline:
button.setFocusPainted(false);
(This is the primary method to remove the "outline" when clicked/focused).



Button has an unwanted outline and box around selected/stationary plates.

```java
shape = (int)(3*Math.random());
plate1.setIcon(plates.get(shape));

p1Stat.setForeground(Color.red);
p1Stat.setText(" HIT!");

try {
    Thread.sleep(1000);
} catch (InterruptedException e1) {
    // TODO Auto-generated catch block
    e1.printStackTrace();
}

p1Stat.setText(" ");
```

system is suposed to display the text for 1 second, but it does not work.
(freezes whole program and breaks it.)

```java
shape = (int)(3*Math.random());
plate1.setIcon(plates.get(shape));

p1Stat.setForeground(new Color(44, 150, 104));
p1Stat.setText(" HIT!");

timer.schedule(new TimerTask() {
    public void run() {
        p1Stat.setText(" ");
    }
}, 500);}
```

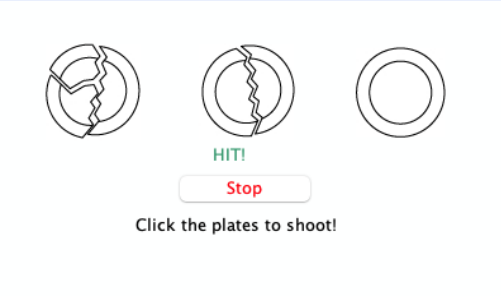
Solution: Create and use a timer insstead. Timer waits 500 mil second and then continues from the code within the loop

```java
if (shoot == 1) {

    shape = (int)(3*Math.random());
    plate2.setIcon(plates.get(shape));

    p2Stat.setForeground(new Color(44, 150, 104));
    p2Stat.setText(" HIT!");

    timer.schedule(new TimerTask() {
        public void run() {
            p1Stat.setText(" ");
        }
    }, 500);}
```



hit text will not disapear after 0.5 seconds

```java
shape = (int)(3*Math.random());
plate2.setIcon(plates.get(shape));

p2Stat.setForeground(new Color(44, 150, 104));
p2Stat.setText(" HIT!");

timer.schedule(new TimerTask() {
    public void run() {
        p2Stat.setText(" ");
    }
}, 500);}
```

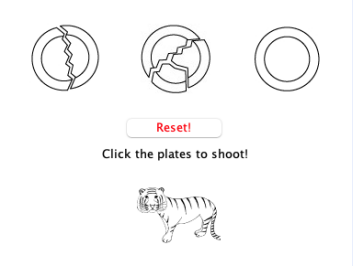
Syntax error - replace p1stat with p2stat

```java
if(counter==2) {

    if(win == true) {
        prize.setIcon(tiger);
    }
    else {
        prize.setIcon(sticker);
    }

    button.setActionCommand("stop");
    button.setText("Reset!");

}
```



System not counting the last plate in the winning calculations.

```java
if (gameStat.equals("on")) {

counter++;

if(counter == 3) {

    if(win == true) {

        button.setForeground(new Color(44, 150, 104));
        button.setText("YOU WIN!");
        status.setText("             prize: tiger");
        timer.schedule(new TimerTask() {
            public void run() {
                button.setForeground(Color.black);
                button.setText("Reset");

            }
        }, 1200);

        prize.setIcon(tiger);
```

Add to counter before determining the result of the throw; set counter equal to 3
