Credit Name: CSE 3010 Computer Science 3

Assignment Name: LocalBank

Decribe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

```
depositAccountButton = new JButton("Deposit to Account");
depositAccountButton.setForeground(new Color(46, 51, 64));
depositAccountButton.setFont(new Font("Devanagari MT", Font.ITALIC, 19));
depositAccountButton.setFocusPainted(false);
depositAccountButton.setActionCommand("depositAccount");
depositAccountButton.setBounds(30, 298, 190, 50);
depositAccountPanel.add(depositAccountButton);
```

```
if(eventName.equals("depositAccount")) {

    try {

        accountIDHeader.setVisible(false);
        accountIDBox.setVisible(false);
        depositHeader.setVisible(false);
        depositBox.setVisible(false);

        ID = accountIDBox.getText();
        amt = (Double.parseDouble(depositBox.getText()));
        successDepositLabel.setVisible(true);
        successDepositLabel.setText(easySave.transaction(1, ID, amt));

    }
    catch(Exception e1) {

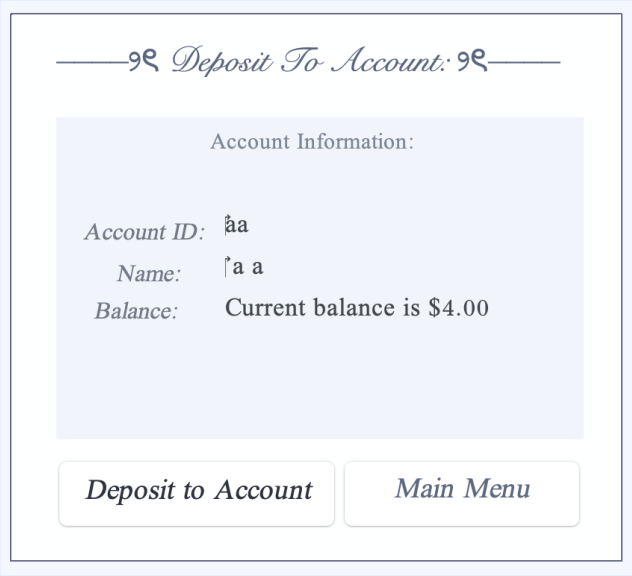
        errorLabel2.setVisible(true);

    }
```

Deposit button does not work when pressed

```
depositAccountButton = new JButton("Deposit to Account");
depositAccountButton.setForeground(new Color(46, 51, 64));
depositAccountButton.setFont(new Font("Devanagari MT", Font.ITALIC, 19));
depositAccountButton.setFocusPainted(false);
depositAccountButton.setActionCommand("depositAccount");
depositAccountButton.addActionListener(this);
depositAccountButton.setBounds(30, 298, 190, 50);
depositAccountPanel.add(depositAccountButton);
```

Solution: forgot to add the action listener "this" for the button



```
 */
public String toString() {
    String accountString;
    NumberFormat money = NumberFormat.getCurrencyInstance();

    accountString = "<html>"+acctID;    //changed for Chapter 11 Exer 1
    accountString += "<br>"+ cust.toString();
    accountString += "<br>Current balance is " + money.format(balance) + "</html>";
    return(accountString);
}
```

Weird lines and arrows appearing before the text in the GUI

```
 */
public String toString() {
    String accountString;
    NumberFormat money = NumberFormat.getCurrencyInstance();

    accountString = "<html>";
    accountString += acctID;
    accountString += "<br>" + cust.toString();
    accountString += "<br>Current balance is " + money.format(balance);
    accountString += "</html>";

    return(accountString);
}
```

Solution: rearrange how text is added to the string to prevent errors between html line spacing
